MALTRIN SS®

Dried Glucose Syrup

MALTRIN SS® Dried Glucose Syrup

GPC's globally marketed MALTRIN® line of carbohydrates includes recently introduced MALTRIN SS® dried glucose syrup. This ingredient is a bland, minimally sweet carbohydrate powder produced from corn of U.S. origin. MALTRIN SS® dried glucose syrup contributes reduced sugars (DP1/DP2) compared to other products with a similar dextrose equivalent (DE). This product is easy to disperse and has excellent clarity and a neutral flavor.

APPLICATIONS

Spray Drying

Bland flavor, high solubility and ease of drying make MALTRIN SS® dried glucose syrup ideal for spray drying flavors and/or other ingredients.

Nutritional Products

MALTRIN SS® dried glucose syrup is a readily digestible carbohydrate that can be used as an excellent source of energy for nutritional products. In dry mix beverage formulations, this product builds solids for enhanced mouthfeel without adding flavor or sweetness. MALTRIN SS® dried glucose syrup contributes body and viscosity in ready-to-drink sports beverages and gels.

Dairy

In soft-serve frozen desserts, MALTRIN SS® dried glucose syrup can build solids with minimal effect on sweetness profile or freezing point. This ingredient provides a creamy mouthfeel with neutral flavor in dairy applications.

Toppings and Variegates

In reduced-sugar toppings, MALTRIN SS® dried glucose syrup can be used as part of a sugar replacement system. It contributes minimal sweetness, builds solids and has a neutral flavor profile.

Bakery

MALTRIN SS® dried glucose syrup aids in replacing sugar or fat in baked goods. This product builds solids and contributes to product tenderness and improves moisture retention. It also prevents sugar crystallization in frostings and glazes.

Other

MALTRIN SS® dried glucose syrup increases gloss and aids in film formation in aqueous coating. It also prevents sugar crystallization in confections.
